

Nationally, a PRRS goal has been set...

SLAGTEGRISE, ANDELEN AF DEKLAREREDE PRRS-ANTISTOF_NEGATIVE

Antal måneder efter PRRS virus er konstateret i besætningen

Fradrag per kg

It's expensive to be reinfected with PRRS
It pays to have a disease eradicated from the entire country
Good farming to help each other

19 – 24 måneder 200 øre Over 24 måneder 300 øre

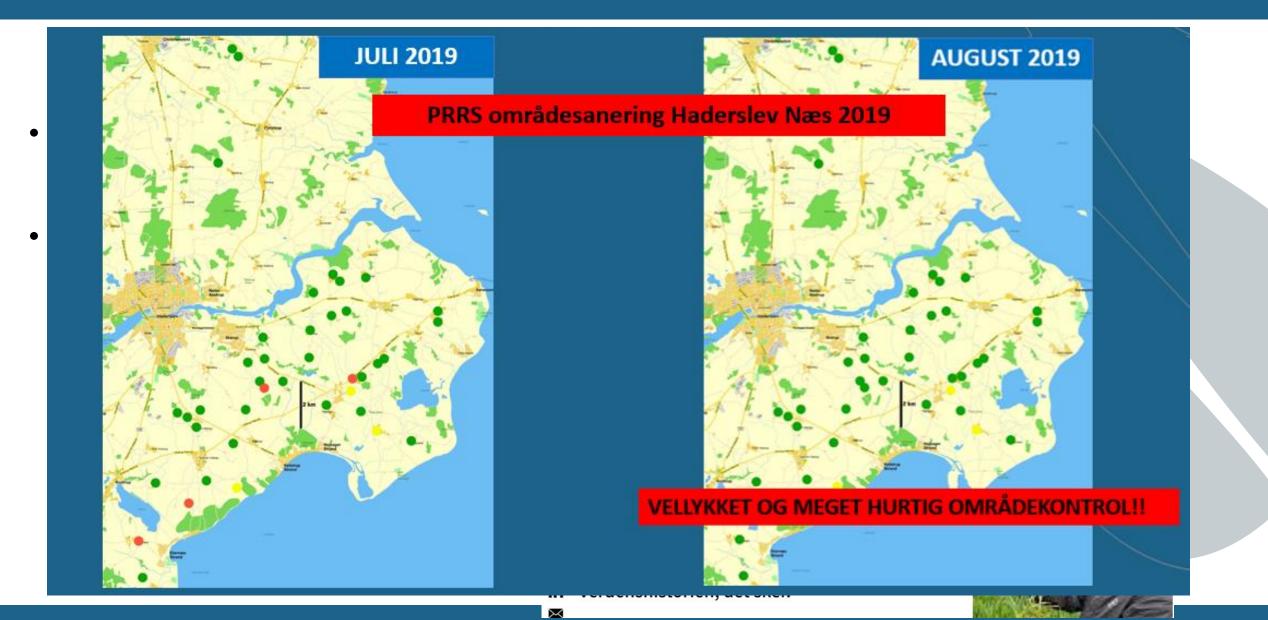

All 17 vets are ready to help you [©]

The 4 PRRS stages in the herd

Stage 1 (outbreak)

- No antibodies
- High virus concentration

Stage 2 (Balance)

- Antibodies
- Low virus concentration

Stage 3 (Disease free)

- Antibodies
- NO virus

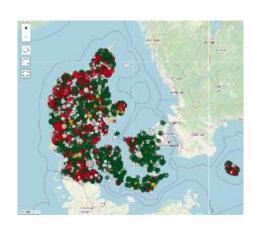

Stage 4 (Open)

- NO Antibodies
- NO virus

Plan Sundeved og Als

- Teams meetings every months
- Meetings with all the veterinarians in the area
- Meetings with farmers and veterinarians
- Status updates every months to the five professional coordinators
- Status updates every third month to all farmers in the area

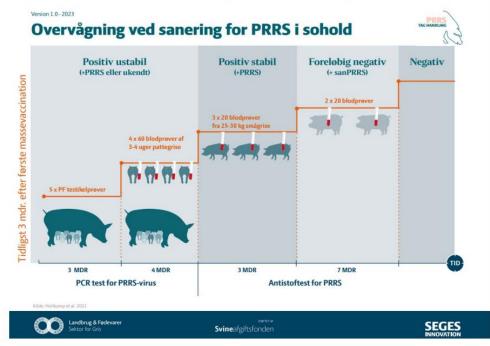

Plan Sundeved og Als

- All farms in the area are testing their status
- Eradicating PRRS at the same time
- Same monitoring plan when eradicating PRRS in a farm
- Two platform of overview of the PRRS status of all farms
 - Landmand.dk
 - PRRS-overblik.dk

Appendiks

Figur 1: Plan for overvågning ved sanering for PRRS i sohold [1].

If your farm is PRRS positive, unstable...

- Your veterinarian will make an eradication plan
- Restricted rules have to be followed in a period of time to eliminate PRRS

What does it really mean..?

"Management Changes to Reduce Exposure to Bacteria to Eliminate Losses from PRRS"

- or in short as McREBEL

McRebel = Internal biosecurity/protection

Tight McRebel at eradication

Not so tight in normal farms

- BUT BE CAREFULL!

The 10 Golden Rules

McRebel

Ved kuldudjævning flyt kun de overskydende grise og flyt mindst muligt rundt på grisene When cross-fostering, move only the surplus and minimize moving of piglets Skift kanvle mellem hvert kuld Ingen kontakt mellem grise fra fravænning til 6 måneder og søe 00 00 · 8 8 A

The 10 Golden Rules

McRebel

- Ved kuldudjævning flyt kun de overskydende grise og flyt mindst muligt rundt på grisene
- When cross-fostering, move only the surplus and minimize moving of piglets
 - При перекрестном вскармливание поросят следует перемещать только в случае их неравномерного распределения, при этом их следует перемещать как можно меньше
- Der må ikke laves ammesøer efter 48 timer!

 No cross-fostering later than 48 hours!

 Не следует проводить перекрестное вскармливание позднее чем через 48 часов!
- 3. Flytning af grise mellem kuld i farestald skal minimeres
 The movement of pigs between litters in the farrowing house must be minimized
 Перемещение поросят в родильном отделении между командами должно быть минимальным

4.

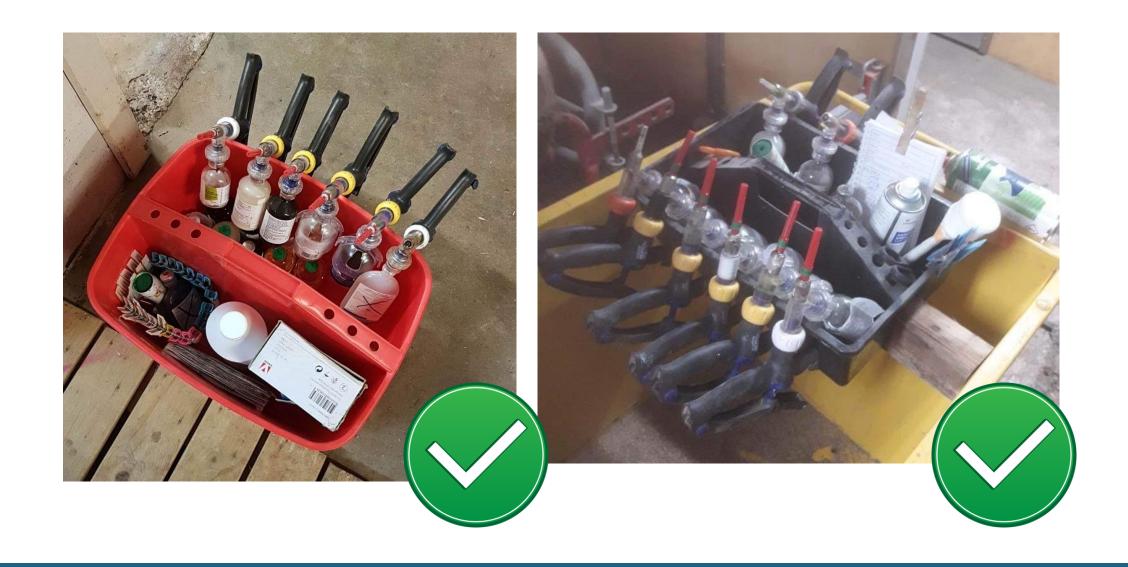

Skift kanyle mellem hvert kuld Change needles between litters

Помните ипользовать новые изды для каждой новой команды в родильно

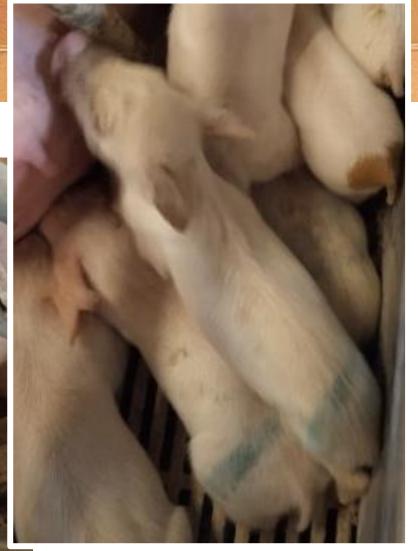

Der må ikke flyttes syge grise. De skal aflives! Don't move diseased piglets. Kill them!

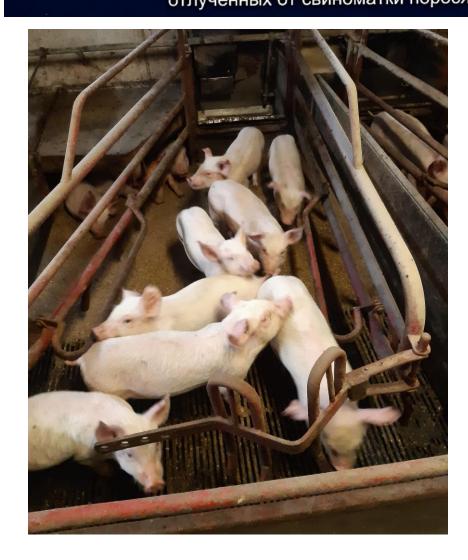

Fravæn alle grise fra et ugehold samtidig. Fravænnede grise i farestalden er forbudt!

Wean all piglets from a week batch at the same time. Weaned piglets in the farrowing unit are banned!

Всех поросят недельного опороса следует отнимать от свиноматки в одно и то же время. Запрещается держать отлученных от свиноматки поросят в цехе для опороса!

Strikt holddrift (alt ind/alt ud)

Strict batch production (all in/all out)

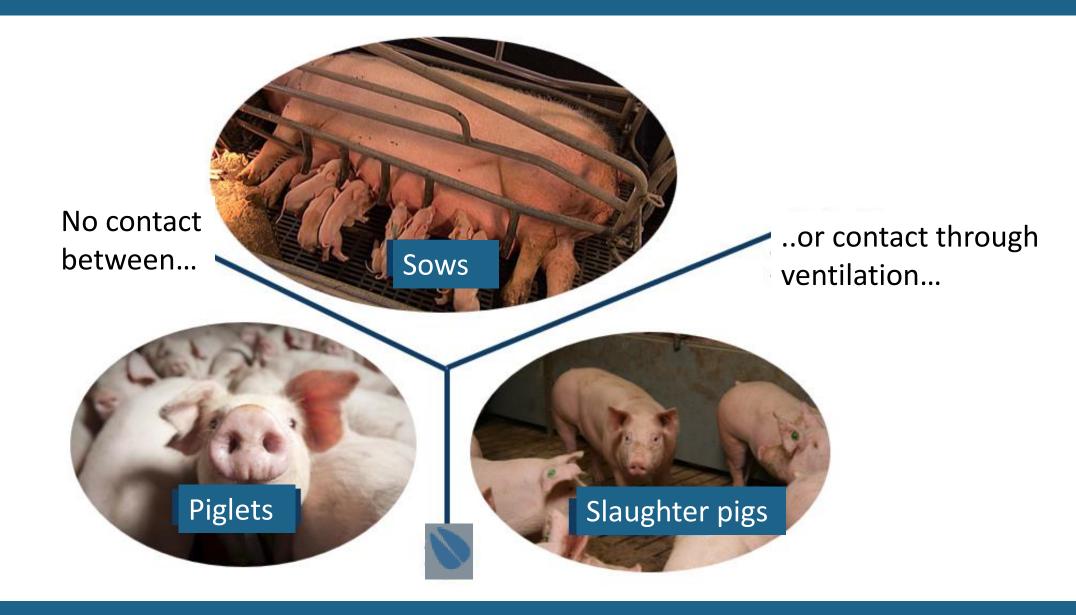

Четкость производственного процесса (система «пусто-занято»)

Ingen kontakt mellem forskellige aldersgrupper
No contact between age groups
Не должно быть контакта между разными возрастными группами

Ingen kontakt mellem grise fra fravænning til 6 måneder og søer

No contact between piglets (weaned up to 6 months of age) and sows

Не должно быть контакта между поросятами, отлученными от вымени и до 6-месячного возраста, и свиноматками

10.

Polte skal altid indsættes via karantæne. Det gælder også egne polte

Always introduce incoming gilts via quarantine, also home produced gilts

Поступающих молодых свиней всегда сначала следует подвергать карантину, даже молодых свиней домашнего производства

Quarantine room/karantænestald

*Must be in seperate building

*Separate entrance for people

*Check last every day

*Seperate ventilation and gylle/manure system

*Wash and desinfect after every group

How do we get Denmark free from PRRS?

- Be sure that everybody follows the eradication plan in the farm
- All farmers in an area must eradicate PRRS at the same time
- Good communication between farmers and veterinarians in an area
- Good communication between the area coordinators

Thank you for your attention...
